Instructions from your ED Healthcare Provider

- Sprain

A sprain is a stretch or tear in one of the tough, fiber-like tissues (ligaments) in your body. This is caused by an injury to the area such as a twisting mechanism. Symptoms include pain, swelling, or bruising. Rest that area over the next several days and slowly resume activity when tolerated. Ice can help with swelling and pain.

SEEK IMMEDIATE MEDICAL CARE IF YOU HAVE ANY OF THE FOLLOWING SYMPTOMS: worsening pain, inability to move that body part, numbness or tingling.
